

Complimentary Legacy Protection Penetration Test™

Protect Your Business. Protect Your Family Legacy.

Family businesses face unique risks. When cybersecurity fails, the impact extends beyond systems—disrupting operations, damaging generational trust, complicating succession, and putting the family name at risk.

Through our partnership with the Delaware Valley Family Business Center, eligible members receive a complimentary cybersecurity penetration test designed for family-owned businesses.

What Is a Penetration Test?

A penetration test is a controlled simulation of a cyberattack, identifying security vulnerabilities before malicious actors exploit them.

This assessment is:

- Non-disruptive to daily operations
- Conducted by experienced cybersecurity professionals, not automated scans
- Focused on meaningful business risk, not technical noise

You receive actionable insight, not overwhelming technical reports.

What You Will Receive

- A tailored cybersecurity assessment for your business model
- Identification of exploitable vulnerabilities
- A plain-language executive summary for leadership
- Practical guidance with no obligation to engage further

This is educational, not a sales process.

Our Commitment

This offering prioritizes education, preparedness, and stewardship. We recognize family businesses operate with different time horizons than public companies.

We surface vulnerabilities before they become crises and help protect generational legacies—not to sell services, but to ensure leaders have information for informed cybersecurity decisions.

Get Started

Complimentary. Confidential. No disruption.

Why This Matters for Family Businesses

Cyber risk impacts more than revenue:

- **Business continuity.** Downtime disrupts relationships built over decades.
- **Reputation** tied to the family name and legacy.
- **Customer and partner trust** that takes years to build.
- **Leadership transitions.** Vulnerabilities discovered during due diligence can derail succession plans.
- **Peace of mind** for family leaders.

Understanding risk early prevents difficult conversations that carry weight beyond the balance sheet.

Who Should Participate

This assessment is ideal for:

- Family-owned and multi-generational businesses
- Founder-led companies planning succession
- Organizations with 25 to 750 employees
- Leaders who want fact-based confidence

If you're protecting what your family built, this provides visibility into unknown risks.
